AWG Mission Statement

The AWG provides operational advisory support globally and rapid solution development to the Army and Joint Force commanders to enhance Soldier survivability and combat effectiveness, and enable the defeat of current and emerging threats in support of Unified Land Operations.

AWG Core Functions

- Operational Advising: Support Army and Joint Force Commanders by advising and assisting predeployment and in-theater forces to enable the defeat of current and emerging threats.
- Identify Capability Gaps: Provide observations and analyses of regional operating environments to identify capability gaps and describe potential conflict zones relevant to future Army requirements.
- Solution Development: Rapidly develop, disseminate and transition nonmaterial and material countermeasures to create tactical and operational advantages in support of Unified Land Operations.
- Assist DOTMLPF Integration: Serve as a catalyst for developing Army capabilities that enhance organizational adaptability, Soldier survivability and combat effectiveness. This is done across the domains of doctrine, organizations, training, material, leadership and education, personnel and facilities (DOTMLPF). Under General Deane's leadership, the Army has fundamentally transformed the Army into the best trained, equipped and most lethal modern land power in the world. Today, TRADOC sustains its position as the Army through four primary functions.
